

As a matter of record, DEK has used the following solvent in DEK blue and silver underscreen cleaners in their various Demonstration Rooms to wipe smears of no-clean solder pastes from metal stencils. The stencils appeared to be cleaned satisfactorily. No obvious problems were encountered by DEK when using the solvent. However the conditions under which DEK used the solvent may differ significantly from the conditions under which other users operate and, as with all materials, users should confirm for themselves that the solvent is suitable for their own process.

QTEK STENCIL CLEAN 4205
